

I had the honor and privilege of being selected to participate as a 2023 Ann Osborn Visiting Professor and attend the 2023 Congreso Argentino de Diagnóstico por Imágenes which is the annual meeting of the Society of Argentinian Radiology. The meeting was held in Buenos Aires, Argentina from September 21-23, 2023. I gave five talks at the meeting. The topics included Artificial Intelligence, Head & Neck Cancer, History of Skull Base Imaging and the Future of Head & Neck Radiology. The final session was an audience participation on interesting skull base cases.

My host at the meeting was Dr. Cristina Besada who is Chair of the Neuroradiology track for the annual meeting. The meeting was extremely well-organized and all of the sessions were well-attended. The accommodation was in the lovely area of Recoleta and the social events were superb. This Visiting Professor program did not allow us the opportunity to visit the different hospitals. However, I hope this can be integrated into future programs held in Argentina.

It was truly a pleasure being selected to participate in this program. Dr. Osborn moderated the session where I delivered my first scientific session in 1993 and I always remember her warm and gracious introduction that put a very nervous neuroradiology at ease! It was an honor for me to participate in this program which pays tribute to such a legendary figure in our field.
