

I was honored to serve as the 2026 Anne G. Osborn ASNR International Visiting Professor at CADI 2026 in Buenos Aires, hosted by the Sociedad Argentina de Radiología (SAR) and FAARDIT as part of ASNR's international outreach program. During the meeting, I presented on CSF leak diagnosis and treatment, advances in artificial intelligence for neuro-oncology, and treatment-response assessment in neuro-oncology, contributing to sessions on CSF dynamics and emerging frontiers in neuro-oncologic imaging. The visit was also an invaluable opportunity for scientific exchange with colleagues from Argentina and across the region, with discussions spanning clinical practice, imaging innovation, and evolving approaches to brain tumor assessment. I am especially grateful to Dr. Cristina Besada of Neuroimágenes Neuroradiology at Hospital Italiano, who played an instrumental role in planning my visit and coordinating the scientific program and lectures. The thoughtfully organized social program, including faculty dinners and the closing reception, also provided a wonderful setting to connect more personally with colleagues and further strengthen professional relationships beyond the lecture hall. My sincere thanks as well to ASNR, SAR, FAARDIT, and all of my Argentine colleagues for their generous hospitality, thoughtful engagement, and for making the visit both scientifically rewarding and personally memorable.
